

Areas Screened Out

The following areas were reviewed during the detailed optioneering phase and it was concluded that no properties are at flood risk and therefore no flood defences are required. The specific reasons for this decision are outlined in detail for each area.

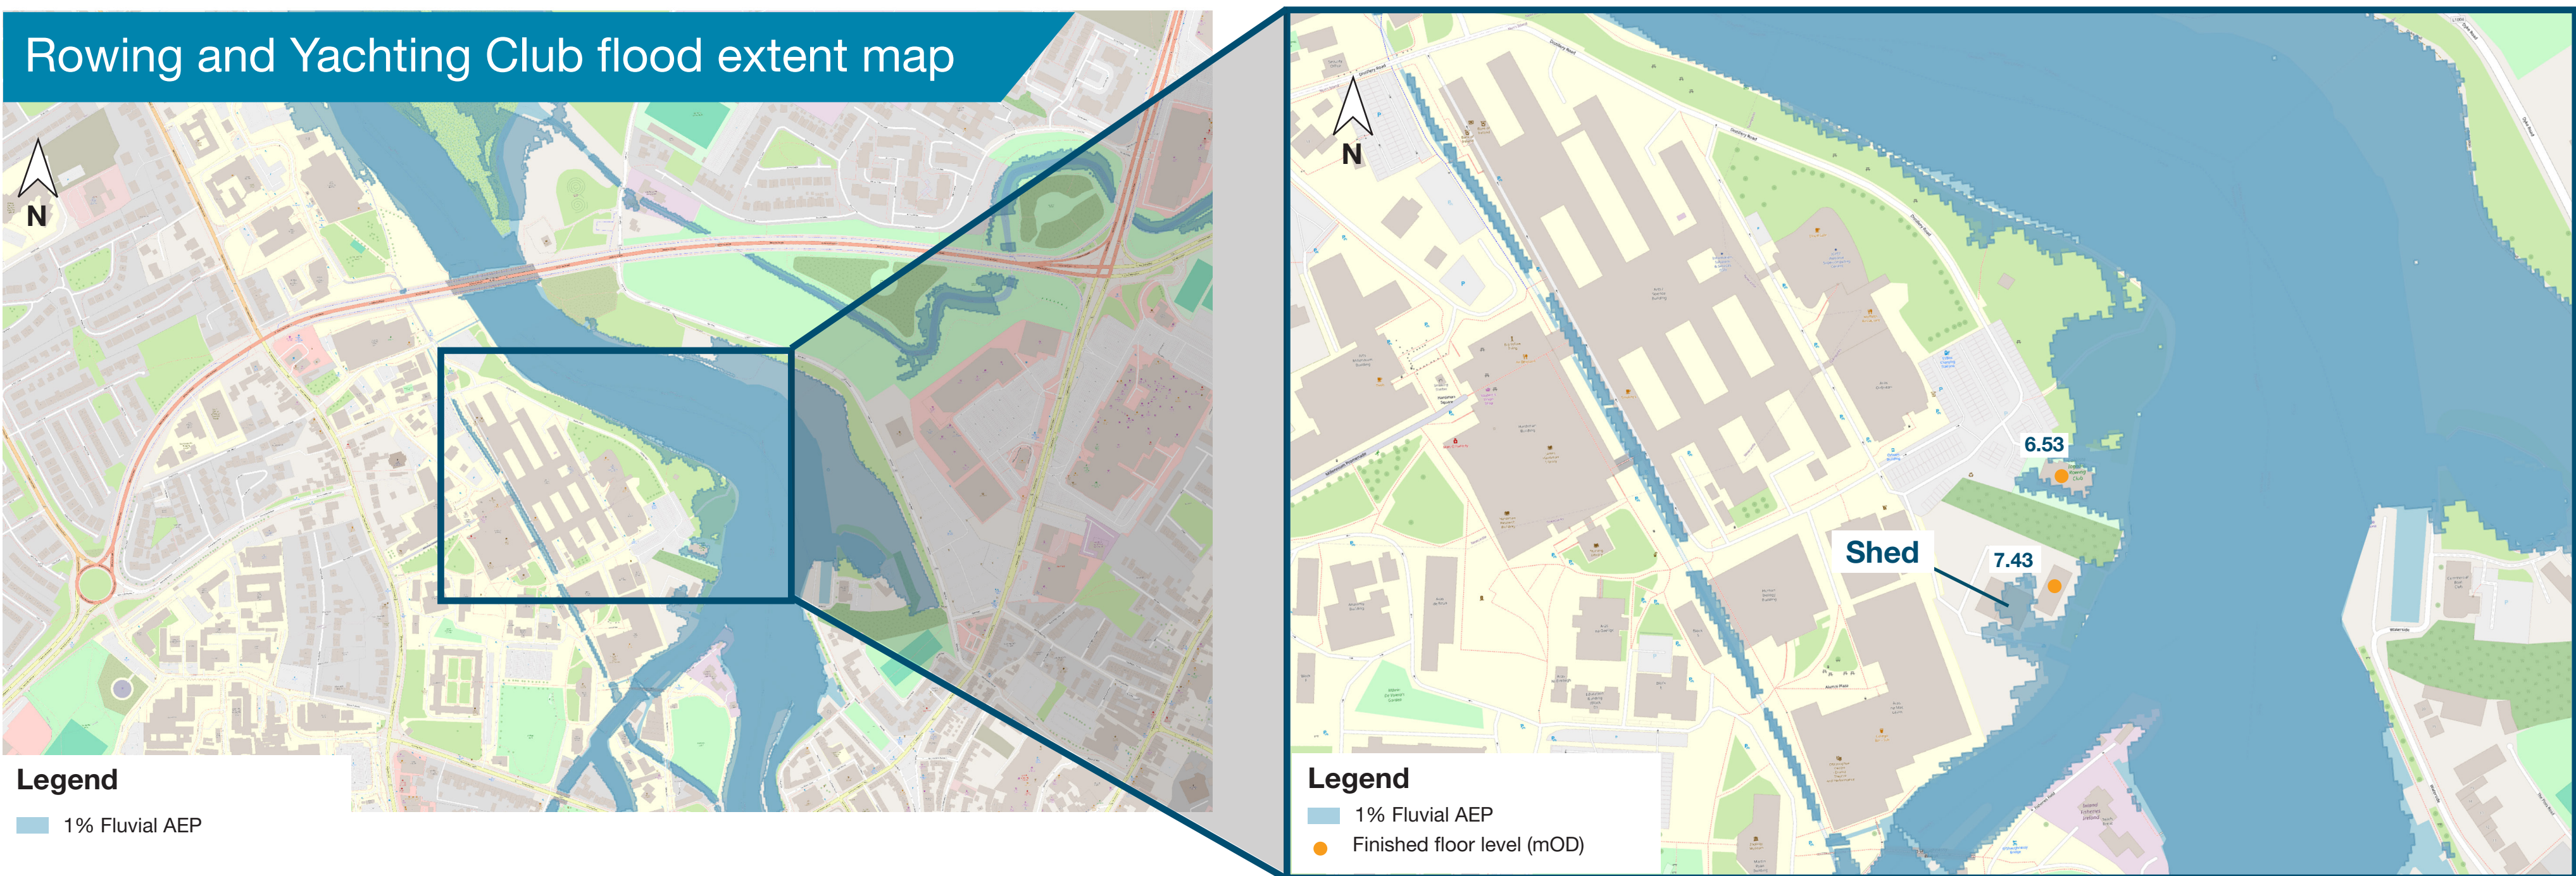

Menlo

Menlo is an independent flood cell. The finished floor levels of the lowest properties in the area are above the design flood level of 7.4mOD. Therefore it is not proposed to provide flood defence measures in the area.

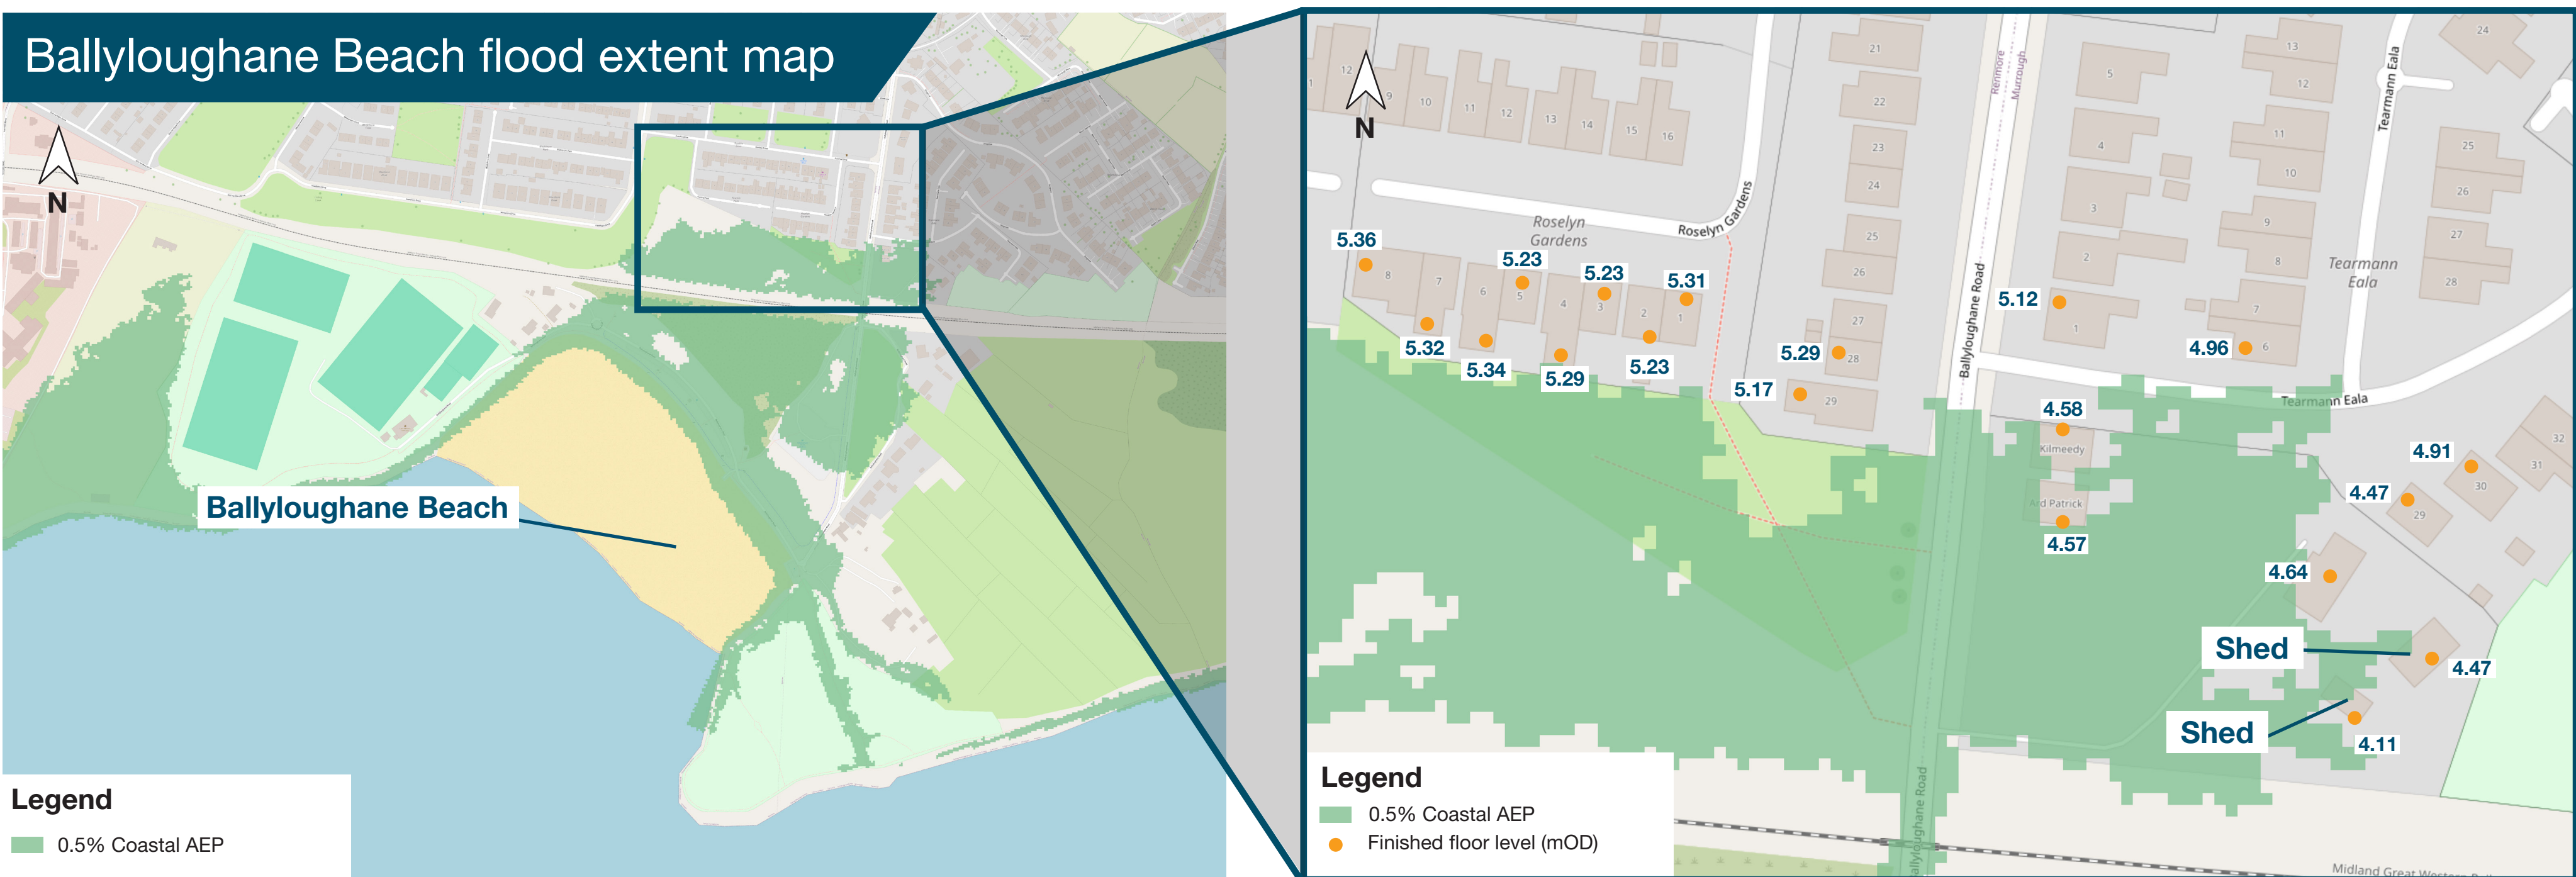

Rowing and Yachting Club

The Rowing and Yachting Club is an independent flood cell. The finished floor levels of the lowest properties in the area are above the design flood level of 6.48mOD. Therefore it is not proposed to provide flood defence measures in the area.

Ballyloughane Beach

Ballyloughane is an independent flood cell. The finished floor levels of the lowest properties in the area are above the design flood level of 4.26mOD. Therefore it is not proposed to provide flood defence measures in the area.

Harbour Enterprise Park

The existing flood risk for the Harbour Enterprise Park flood cell has been assessed as part of the Scheme and options have been developed. However, there is uncertainty around the future Galway Port Extension Project and its interaction with the Flood Relief Scheme.

Flood mitigation options will be developed as required when there is greater clarity regarding planning consent under the Galway Port Extension Project.
